

2010 ReVISION House

Uponor AquaPEX

AquaPEX is a superior plumbing pipe for residential and commercial buildings. More resistant than copper to the corrosive effects of aggressive water, including those resulting from low PH and chlorine. Unlike Copper and CPVC, it is installed without torches, glues, or solvents. PEX is flexible, allowing in-line bends and the elimination of fittings. With fewer fittings and 90 degree direction changes, PEX is quieter than rigid piping and helps to eliminate "water hammer". PEX is better at retaining heat in hot-water lines, and resists condensation better than copper in cold water lines.
